

DAISY TWIST / CHAIN / DYNEEMA

WEBBING

Ref. 321201 - 321202 / 321301 - 321302 / 3214

Ref. 321201

- Spiral construction addresses the dangerous consequences of cross-clipping adjacent loops
- Available in 2 lengths (48 and 54 inches, 122 and 137 cm)

Ref. 321202

The spiral construction of the Daisy Chain Twist addresses one of the main concerns with traditional daisy chains where the user clips a single carabiner through two adjacent loops creating a situation where they are secured by nothing more than the single bar tack between the loops instead of the 22 kN strength of the entire loop. Robust 16 mm Nylon construction with special machine-driven bar tacks distribute the load multi-directionally. Available in 2 lengths (48 and 54 inches, 122 and 137 cm).

Ref. 321301

- Standard Nylon daisy chain
- Available in 2 lengths (48 and 54 inches, 122 and 137 cm)

16 mm Nylon daisy chain with standard construction. Available in 2 lengths (48 and 54 inches, 122 and 137 cm). The bottom loop has a twist so that it girth hitches cleanly to a climbing harness.

Ref. 321302

NOTE: never cross-clip two loops of a daisy chain—full strength comes from the main bartack and not the individual loop stitches.

Ref. 3214

- Rated to 22 kN

Standard Daisy Chain with 11 loops constructed from lightweight, hydrophobic Dyneema webbing. The bottom loop has a twist so that it girth hitches cleanly to a climbing harness.

NOTE: never cross-clip two loops of a daisy chain—full strength comes from the main bartack and not the individual loop stitches.
