PULSAR

Go above and beyond and hone your skills with Pulsar, the most unique throw bag on the market. Its sleek shape, bounce, and extreme resistance will revolutionise how you launch!

MANIPULATION BAG

DESCRIPTION

The PULSAR is a "manipulation bag" for a preciser work. The design is innovative, with a metallic core and a polymer shell. The result is a product that is very resistant, with a very long lifespan. The outer shell brings a rebound effect, the compact streamline shape helps handling the bag in the tree top. It is also easily spotted in the tree, with its high visibility colour. So the PULSAR is THE manipulation bag to complete the classic throwbags. The shape of its ring and the way it is fixed both help attaching the throwline.

TECHNICAL INFORMATION

Core	galvanised steel
Shell	polymer
Ring	stainless steel wire (folded and inserted after injection moulding)
Ring strength	250 kg (551.2 lb)

Weight	500 g (18 oz)
Dimensions	11.5 cm high (4.5 in) / 5 cm diameter (2 in)

REFERENCE

FTC/P500
